

CUSTOM IMPRINTED SHIRTS

Full-color graphics without minimums orders and set-up fees, your custom graphic gets outputted on full-color thermal transfer paper or we use a Cad-Cut ThermoFilm process, all which is as durable as screen-printing, and then heat imprinted on our shirts.

Send us your artwork, which will then be made into vectors (i.e. outlines, curves). We prefer artwork in this format. These files are often created in CorelDRAW or Adobe Illustrator and have file extensions such as .eps, .ai, .wmf and .cdr. We can also accept most graphic file formats (BMP, TIF, JPG, GIF etc.) These files should be actual size or larger, with a resolution of 300 dpi or greater. Prices do not include any modifications we need to make to your graphic file and is for design on one side only. Please email for quote to put design on other side of shirt. Also please note that some small logos can only be put on white or ash colored shirts.

UPS shipping cost will be added to all orders. For more information or a sample please call or email. For shirts with pocket add \$1 each and note that colors available may differ from those listed below.
*Add \$1 per shirt for sizes 2X, \$2 per shirt for 3-4X.
