Notes

Dial-up: Analog (up to 56 Kbps) and ISDN (up to 128 Kbps). Basic internet service and universally available where you have access to a telephone line.

DSL: Digital Subscriber Line (ADSL, SDSL, etc.) with various packages offered. DSL speeds range from 256 Kbps up to 1.54 Mbps download and 128 Kbps to 256 Kbps upload speeds.

Cable: Cable TV with speeds up to 3 Mbps

Dedicated Service - Landline: Terrestrial based services delivered via traditional private line services. Various speed levels offered beginning at 128 Kbps up to 45 Mbps.

Dedicated Service - Wireless: Delivered via antenna mounted to office. Speeds are similar to terrestrial-based services and top out at 11 Mbps under the best of conditions. Often serves areas beyond the reach of other ISPs.

Satellite: Very Small Aperture Satellites (VSAT) service provided by orbiting geosynchronous satellites with typical speeds of 400Kbps download and 128k upload. Can also extend beyond the reach of traditional service providers.
